

SMART INDIA HACKATHON 2026

- **Problem Statement ID – 26092**
- **Problem Statement Title – AI-Driven Scheme Matching for Marginalized Entrepreneurs**
- **Theme- Smart Automation**
- **PS Category- Software**
- **Team ID -**
- **Team Name - TechBizz**

- **SchemeSetu** is a multilingual, voice-enabled AI platform guiding beneficiaries from discovery to verified Channel Partners using official knowledge sources.

- ✓ AI voice multilingual chat
- ✓ Smart scheme recommender with match score
- ✓ EMI & financial calculator
- ✓ Nearest partner locator (map-based)
- ✓ Local LLM for gov. data privacy
- ✓ Hallucination-proof, citation-backed AI
- ✓ DigiLocker document sync & tracking

Prototype Interface

SchemeSetu Architecture

TECHNICAL APPROACH

<u>Component</u>	<u>Proposed Stack</u>
Frontend	Flutter
Backend	FastAPI
Voice / Speech	Bhashini SDK / Whisper-Indic
AI	Local LLM (Ollama) + RAG
Embeddings	Sentence Transformers
Database	PostgreSQL + PostGIS
Maps	MapMyIndia API
Integration	DigiLocker / API Gateway
Security	Sovereign Local Inference, DigiLocker PKI Sync, JWT Session Auth
Deployment	Docker

FEASIBILITY

TECHNICAL FEASIBILITY

- All core components (RAG, local LLM, EMI calculator, maps, DigiLocker APIs) are mature and openly documented.

RAG Local LLM EMI Calculator Maps API DigiLocker APIs

- Prototype can start with a limited set of schemes and a manually verified partner directory.

DATA AVAILABILITY

- Scheme rules, eligibility, and interest rates are available from MoSJE/NSFDC websites and PIB releases.

- Partner lists exist on PM-SURAJ and state SC corporation portals.

VIABILITY (SUSTAINABILITY & SCALE)

COST-EFFECTIVE

Open-source stack + local LLM reduces recurring cloud/API costs.

GOVT-ALIGNED

Supports MoSJE's empowerment goals; can be adopted by NSFDC/SCAs as an official front-end.

SCALABLE

Architecture supports adding more schemes, states, and languages without major redesign.

MEASURABLE IMPACT

Clear metrics: recommendation accuracy, reduced misrouted applications, faster submission time, number of beneficiaries served in regional languages.

Challenge

Mitigation

Scheme rules change periodically	Versioned scheme database with effective dates
AI may provide incorrect information	Rule engine + grounded RAG + citations
Sensitive government data	Local LLM, encryption, consent, data minimization
Partner eligibility changes	Admin dashboard and periodic partner-data updates
Low digital literacy	Voice-first interface and assisted-service mode
Limited internet connectivity	Lightweight app, SMS alerts, and offline form saving
Language ambiguity	Human review option and multilingual validation

❖ Note:

- **Zero Cloud Inference Overhead:** Deploying quantized 4-bit local weights eliminates recurring token API expenses, keeping ongoing cloud infrastructure costs minimal for state agencies.
- **Low-Bandwidth Resilient:** The progressive web interface caches essential rules and form schemas locally, ensuring high operational viability in low-connectivity 2G rural regions.
- **Non-Invasive Core Integration:** Connects seamlessly with the existing PM-SURAJ portal and DigiLocker APIs without demanding costly retrofits to legacy banking or state agency databases.
- **Institutional Risk Safeguard:** Programmatically filters out channel partners with high default or overdue rates, ensuring sustainable fund utilization and viable disbursal channels.

IMPACT AND BENEFITS

FOR BENEFICIARIES

- Better awareness of preferential schemes.
- Fewer misrouted applications.
- Clear comparison of loan amount, interest, tenure, EMI, and documents.
- Support in local languages.
- Reduced dependence on intermediaries.

FOR CHANNEL PARTNERS

- Better-quality and pre-screened applications.
- Reduced manual verification.
- Correct scheme-wise routing.
- Improved visibility into application status.

FOR THE GOVERNMENT

- Transparent and auditable recommendations.
- Improved fund utilization.
- Reduced application-processing time.
- Data-driven identification of under-served districts.
- Better monitoring of partner performance.

❖ Target Performance Indicators:

- ✓ **90% Reduction in Cycle Time:** Drastically compresses the scheme-to-submission pipeline from a **45-day offline ordeal to under 5 minutes**.
- ✓ **Zero Document Leakage:** Ensures 100% data integrity and pre-verification via digital credential synchronization, dropping manual processing errors.
- ✓ **Dramatically Lower Rejection Rates:** Delivers highly aligned, pre-screened application dossiers, increasing bank confidence and approval speeds.
- ✓ **Optimized Fund Utilization:** Ensures government welfare funds are directed rapidly to active, credit-healthy channel partners with available limits.

Key Success Metrics for Scheme Discovery Platform

Scheme Recommendation Accuracy

Partner Routing Success Rate

Reduction in Incomplete Apps

Discovery to Submission Speed

Regional Language Adoption

Document Verification Rate

❖ Primary Government Sources

- [Ministry of Social Justice & Empowerment \(MoSJE\)](#) - Scheme policies and guidelines
- [NSFDC Official Website](#) - Scheme details, eligibility and Channel Partners
- [PM-SURAJ Portal](#) - Official application ecosystem
- [DigiLocker](#) - Consent-based document access
- [PIB](#) - Government announcements and policy updates

❖ Privacy & Compliance

- [Digital Personal Data Protection Act, 2023](#) - Data privacy considerations
- **Note:** SchemeSetu solves specific problem of MoSJE, which does not have any current implemented private or government competitors.
